

Hello everyone, attached are several photos taken while collecting our September State bacteria samples. This has been an on-going issue for quite some time. You can see in the pictures a bag of less than desirable contents has been not only left in front of our hydrant but just a few feet away from our routine sample tap for coliform and E.coli. This is not the only place this happens, this location is in front of the Jr. High School, and in many cases it will continue to pile up over time. Not wanting to increase the risk of another boil order I would like to post notice to the general public that this is not acceptable.
